

ABSTRACT OF THE DISCLOSURE

A device for selectively controlling the height of a snow blower auger housing relative to the surface from which snow is being removed. Glide wheels are attached to the sidewalls of the auger housing of a snow blower to support the snow blower auger housing and to provide for clearance between the scraper blade and the surface to be cleared of snow. A glide wheel assembly may be fixably appended to the side walls of the auger housing and provides for easily adjustable height to set and maintain the height of the scraper blade in the auger housing at a desirable distance above the surface.
